

Engineers helped put our footprint on the moon...

Forty years ago, on July 20, 1969, the whole world watched as America took a giant leap forward in the exploration of space. Members of the Institute of Electrical and Electronics Engineers, working for NASA and its industry contractors, helped make those historical first steps with Apollo 11 a reality. And 40 years later, engineers, computer scientists and allied professionals are still helping to push back the frontiers of space, while developing new technologies that fuel our economy and create jobs here on earth. We're glad engineers have left their mark, and we're convinced they'll keep on making an indelible impression for years to come.
