September 22, 2008

The Honorable Harry Reid
Majority Leader
U.S. Senate
S-221 U.S. Capitol Building
Washington, DC 20510-7020

Dear Senator Reid and Senator McConnell:

As the 110th Congress draws to a close, America’s leading businesses, scientific organizations, and universities urge you to fully fund the America COMPETES Act in FY 2009. This includes adjusting funding levels in any Continuing Resolution (CR) to bolster U.S. competitiveness by increasing funding for basic research at the National Science Foundation (NSF), the Department of Energy (DOE) Office of Science, and the National Institute of Standards and Technology (NIST).

We appreciate that Members on both sides of the aisle and leaders at both ends of Pennsylvania Avenue agree on the need for additional investments in basic research. If approved, these investments would strengthen our economy, help us meet our long-term energy needs, and enhance our defense capabilities while helping to train our next generation of scientists, mathematicians, and engineers.

Congress and the Administration made substantial progress last year with the enactment of the America COMPETES Act. This year, the Administration assigned a high priority to our global economic competitiveness in its FY 2009 budget request by including funding for the American Competitiveness Initiative. The House and Senate Appropriations Committees marked up FY2009 bills with robust funding for the NSF, DOE Office of Science, and NIST. Additionally, Congress recognized the importance of basic research by approving FY 2008 supplemental funding for the NSF and the DOE Office of Science -- additional funding we greatly appreciate. However, there is a long way to go toward full funding of the America COMPETES Act, and we are very concerned about the possibility of a long-term CR that freezes funding for these agencies at FY08 levels.

Another delay in funding the America COMPETES Act would further erode our scientific leadership and talent base. Failing to build upon the additional funding provided for science in the FY08 emergency supplemental bill would represent a step backwards, again threatening our national laboratories and sending yet another negative signal to young scientists and students at our universities.

Congress, working with the White House, is once again faced with the challenge of making investments that can strengthen our nation’s ability to innovate and compete globally. We urge you to fully fund the America COMPETES Act.

Sincerely,
